

HYDRONIC PERIMETER BASEBOARD

MODEL HB

by HydroTherm

HydroTherm[®]

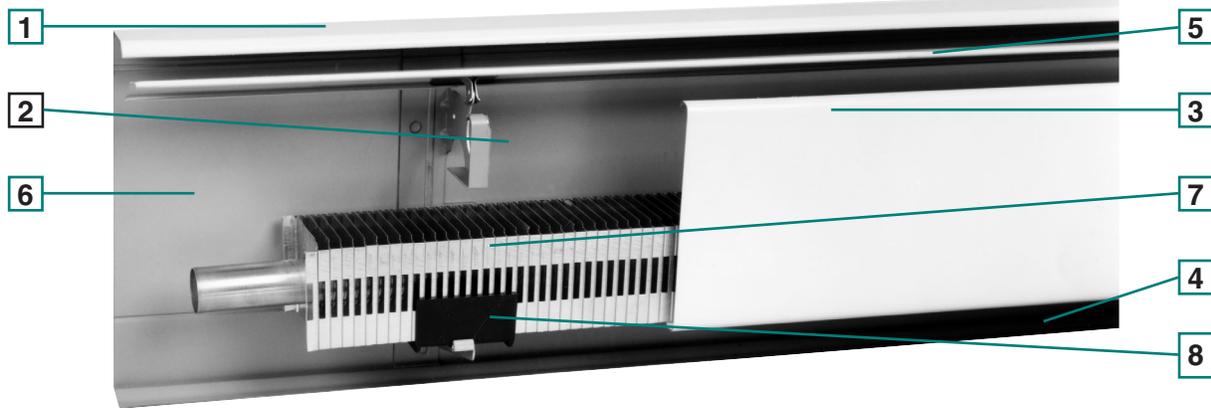

Model HB baseboard panels. . . stylish modern comfort that's easy to install

Symmetrically styled for modern, low-silhouette appearance... designed for fast, low-cost installation... and engineered for peak hydronic performance... that's Model HB Hydrotherm, a residential baseboard.

Compact Model HB Hydrotherm stands only 7 $\frac{3}{8}$ " high and extends only 2 $\frac{1}{16}$ " into the room when set flush against the wall, and even less when recessed to plaster depth. Homeowners like the simple, uncluttered look of Model HB Hydrotherm panels... and the decorating freedom provided by the white semi-gloss prime coat, which may be left as is or repainted later (with any good quality alkyd base paint) to match room decor. Installers like the

convenience of working with this baseboard. The back panel stands unaided against the wall so that all back panels, filler and joining pieces can be positioned and fastened to the wall by one person. Brackets, dampers, front panels and accessories snap right on. No tools needed. No time wasted. Two high-capacity heating elements are available for installation flexibility. And Model HB Hydrotherm is packaged completely assembled, in 2' through 8' lengths.

No matter what the requirements, Model HB Hydrotherm does the job with efficiency, economy and style.

1 - ENCLOSURE TOP AND BACK PANEL - is of one-piece steel construction for strength and durability. Smooth surface won't collect dust and lint. Lower portion is extended 3/4" out from wall to cover any openings between wall and finished flooring and to let panel stand unaided while being fastened to wall.

2 - SNAP-IN BRACKETS - are die-formed of one-piece heavy gauge galvanized steel to support front panel and element where required; can be located at any point along back panel.

3 - ENCLOSURE FRONT PANEL - is of flat, dent-resisting steel; firmly snaps onto brackets either way (there is no top or bottom edge) and is easily removed for cleaning when necessary.

4 - AIR INTAKE SPACE - allows unrestricted circulation of air for maximum heating efficiency and permits easy cleaning underneath element.

5 - PIVOT-MOUNTED DAMPER - allows positive fingertip control for easy opening and closing from any point along its length; can be set in any position to regulate heat flow.

6 - ENCLOSURE INTERIOR - gray prime coat provides background so that brackets and element blend in.

7 - HEATING ELEMENTS - two, high-output elements are available, each with heat-reflecting interlocked aluminum fins (vented for maximum performance) bonded to seamless copper tubing for quick response, high I=B=R approved ratings.

8 - SILENT SLIDE SHOE - Made of heat resistant nylon material which provides sound insulation and allows smooth element expansion motion.

Ratings

I=B=R Approved

MODEL	WATER RATE GPM	WATER FLOW RATE LB./HR.	COPPER TUBE SIZE	HOT WATER - BTU/HR./LIN. FT.								
				140°	150°	160°	170°	180°	190°	200°	210°	220°
HB-500 ⁿ	4	2000	1/2"	340	410	480	550	610	690	750	820	900
	1	500	Nominal	330	390	450	520	580	650	710	780	850
HB-750 [†]	4	2000	3/4"	330	390	450	530	590	670	730	800	870
	1	500	Nominal	310	370	430	500	560	630	690	760	820

ⁿApproved I=B=R water ratings shown for HEATRIM/AMERICAN Panels (with Model E-500 element) are based on a water flow of 500 pounds per hour with a pressure drop of 0.260 inches of water per lineal foot and a water flow rate of 2000 pounds per hour with a pressure drop of 2.900 inches of water per lineal foot. As allowed by the Institute of Boiler and Radiator Manufacturers (I=B=R) Testing and Rating Code for Baseboard Type of Radiation, 15% is added to water heat capacity.

The use of I=B=R ratings at water flow rates of 2000 pounds per hour is limited to installation where the water flow rate through the baseboard unit is equal to or greater than 2000 pounds per hour. Where the water flow rate through the baseboard is not known, the I=B=R rating at the standard water flow of 500 pounds per hour must be used.

[†]Approved I = B = R water ratings shown for HEATRIM/AMERICAN Panels (with Model E-750 element) are based on a water flow of 500 pounds per hour with a pressure drop of 0.047 inches of water per lineal foot and a water flow of 2000 pounds per hour with a pressure drop of 0.530 inches of water per lineal foot. As allowed by the Institute of Boiler and Radiator Manufacturers (I=B=R) Testing and Rating Code for Baseboard Type of Radiation, 15% is added to water heat capacity.

These ratings are based on active (finned) HEATRIM lengths. Difference between active length and total length of the standard HEATRIM heating elements is 4 3/4 inches. Elements are unpainted.

Non-ferrous fins on elements measure 2 1/8 x 2 1/8 x 0.008 inches, spaced:
 HB-500, 50.5-52 fins per foot
 HB 750, 49.9-52 fins per foot

end cap

A one-piece accessory, 3 inches wide; slips in over top of back panel and snaps firmly to bottom of front panel; adjustable end provides clearance for piping connections.

valve enclosure

A one-piece accessory, available in 4" width; slides behind enclosure back panel and snaps securely into place at bottom of enclosure front panel; telescopes for adjustable end clearance.

inside corners

Two inside corners are available: a 90° corner; and a 135° plain corner for use under bay windows.

outside corners

Two outside corners are available: a 90° corner; and a 135° corner for use under bay windows.

joiner or filler piece sets

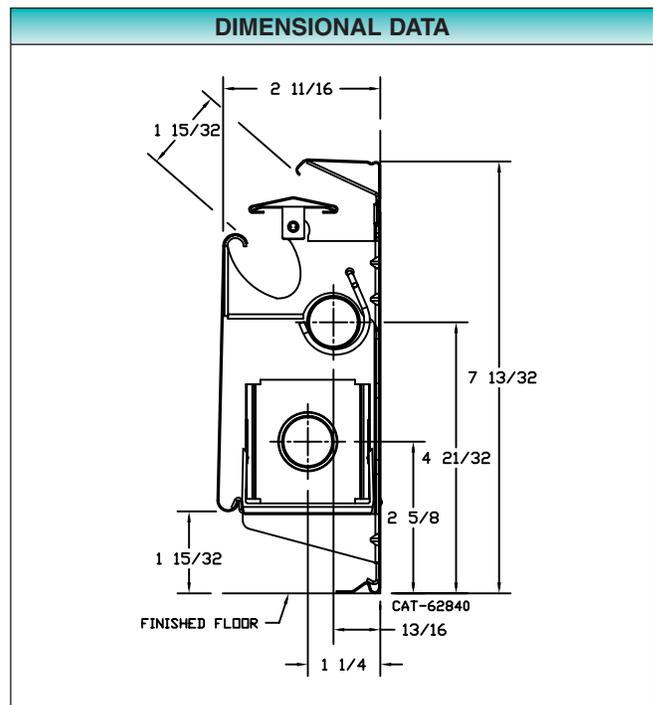

Consists of front piece, back piece, and damper piece; available in 2", 7" and 14" widths.

3" wall end piece

A one-piece accessory that can be used on either end of an enclosure panel; hooks in over top of back panel and snaps firmly to bottom of front panel; extends to floor surface.
