

PURE PAK RECESSED AIR CLEANER

The PurePak Air Cleaner has been engineered to effectively clean the air as it is circulated through our high velocity air conditioning system. Designed to be low profile, the air cleaner is concealed within our return air box which can be installed inconspicuously in a ceiling or a wall. Because the safe 24-volt current creates an electrostatic field inside the core, they use a very sparse media that is not restrictive to air flow. The core polarizes particles and captures particles using a non-ionizing process that can be used year-round.

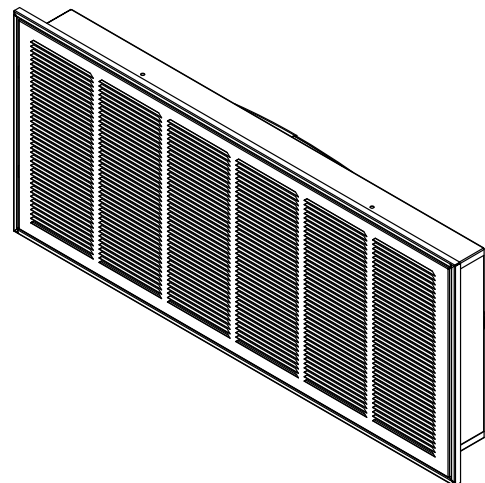

REMOVES AIRBORNE PARTICLES

- Pollen
- Mold
- Dust mites
- Hairspray
- Auto emissions
- Lead dust
- Bacteria
- Smoke from cooking and tobacco
- Fine dust particles
- Paint pigments
- VOCs - including formaldehyde and off gases from carpets, furniture and cleaning products

STANDARD AIR CLEANING FEATURES

- 97% capture rate down to .3 microns
- Patented media design also absorbs odors
- Does not create ozone or charged particles
- Minimal maintenance required
- Low-cost media replacement - typically 3 times per year
- Safe 24 volt current
- Is quiet and does not "snap"
- Does not lose efficiency as media loads
- 5-year powerhead warranty

PurePak Air Cleaner

Particle Size
Typical Contaminant

3-10 Microns

Pollen, mold, dust mites, hairspray

99%

1-3 Microns

Auto emissions, lead dust, large bacteria

98.6%

.3-1 Micron

Smoke (tobacco, cooking), small bacteria, fine dust, paint pigments

97%

VOCs (odors, off gases including formaldehyde from carpets, furniture, and cleaning products)

40%

Other 4-6" Pleated Filters

Particle Size
Typical Contaminant

3-10 Microns

Pollen, mold, dust mites, hairspray

98%

1-3 Microns

Auto emissions, lead dust, large bacteria

Not Effective

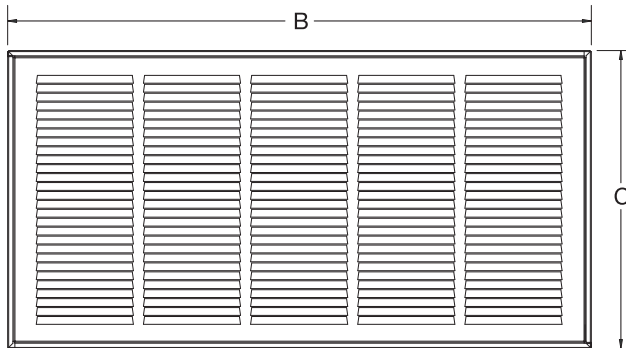

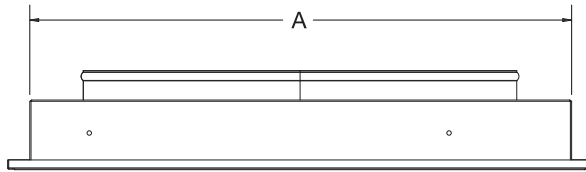

.3-1 Micron

Smoke (tobacco, cooking), small bacteria, fine dust, paint pigments

Not Effective

VOCs (odors, off gases including formaldehyde from carpets, furniture, and cleaning products)

Not Effective
