ENCLOSURE:
STYLE: “Classic”
COLOR: White
FRONT: 18 Ga. Roll Formed Prepainted Steel

BACKPLATE:
22 Ga. Roll Formed Prepainted Steel

DISCHARGE GRILLE:
14 Ga. Clear Anodized Extruded Aluminum

ELEMENT:
TYPE: Cu/Al Mechanically Expanded Flared One End

BRACKETS:
Die Formed 16 Ga. Prepainted Steel

SLIDE SHOES:
High Temperature Nylon Snap On

ACCESSORIES:
All overlapping 20 Ga. Steel with Snap On Fit and Baked Enamel Finish

SCL-2
High Capacity Baseboard Radiation
Furnish and install where shown on all plans/drawings, Classic Finned Tube Enclosure and Element as described or approved equal of both quality and BTU capacity.

The Classic Baseboard assembly will include a full length 14 gauge clear anodized extruded aluminum discharge grille. The front panel of the baseboard radiator enclosure, as called out Classic, will be manufactured from 18 gauge pre-painted bonderized C.R.S. The backplate will be manufactured from 22 gauge pre-painted bonderized C.R.S. All lateral bends are to be roll formed to ensure continuity of all adjoining enclosures and accessories. The enclosure lengths are to be provided in 12 inch increments from 2 feet through 8 feet long. The front panel is to be fully engaged onto mounting brackets engaged with the back panel. A panel joiner piece is to be used where two pieces of enclosure are adjoining each other in a run. This is to be supplied in each 5’, 6’ and 8’ assembly package.

All accessories will be die formed 20 gauge cold rolled steel and finished with a baked enamel finish. The accessories will overlap the installed enclosure and are to provide adjustment for make-up in the installed runs of enclosure. The accessories will extend to the floor. The accessories are to be enclosure height.

The brackets are to be of a one piece, die formed construction. The material is to be 16 gauge pre-painted bonderized C.R.S. The bracket is to be self locating for vertical positioning at installation. The bottom horizontal leg is to snap into bottom bend of the enclosure and is to support the element where slide shoes are located.

All elements are to be of the mechanically expanded type to ensure that proper fin to tube bonding is maximized. Copper/Aluminum elements are to be provided with one end mechanically swaged (flared) for proper assembly.

In the interest of product improvement, we reserve the right to make changes without notice.
